

Les fortifications de VAUBAN

inscrites sur la Liste du patrimoine mondial de l'UNESCO

Échelle 1:1000

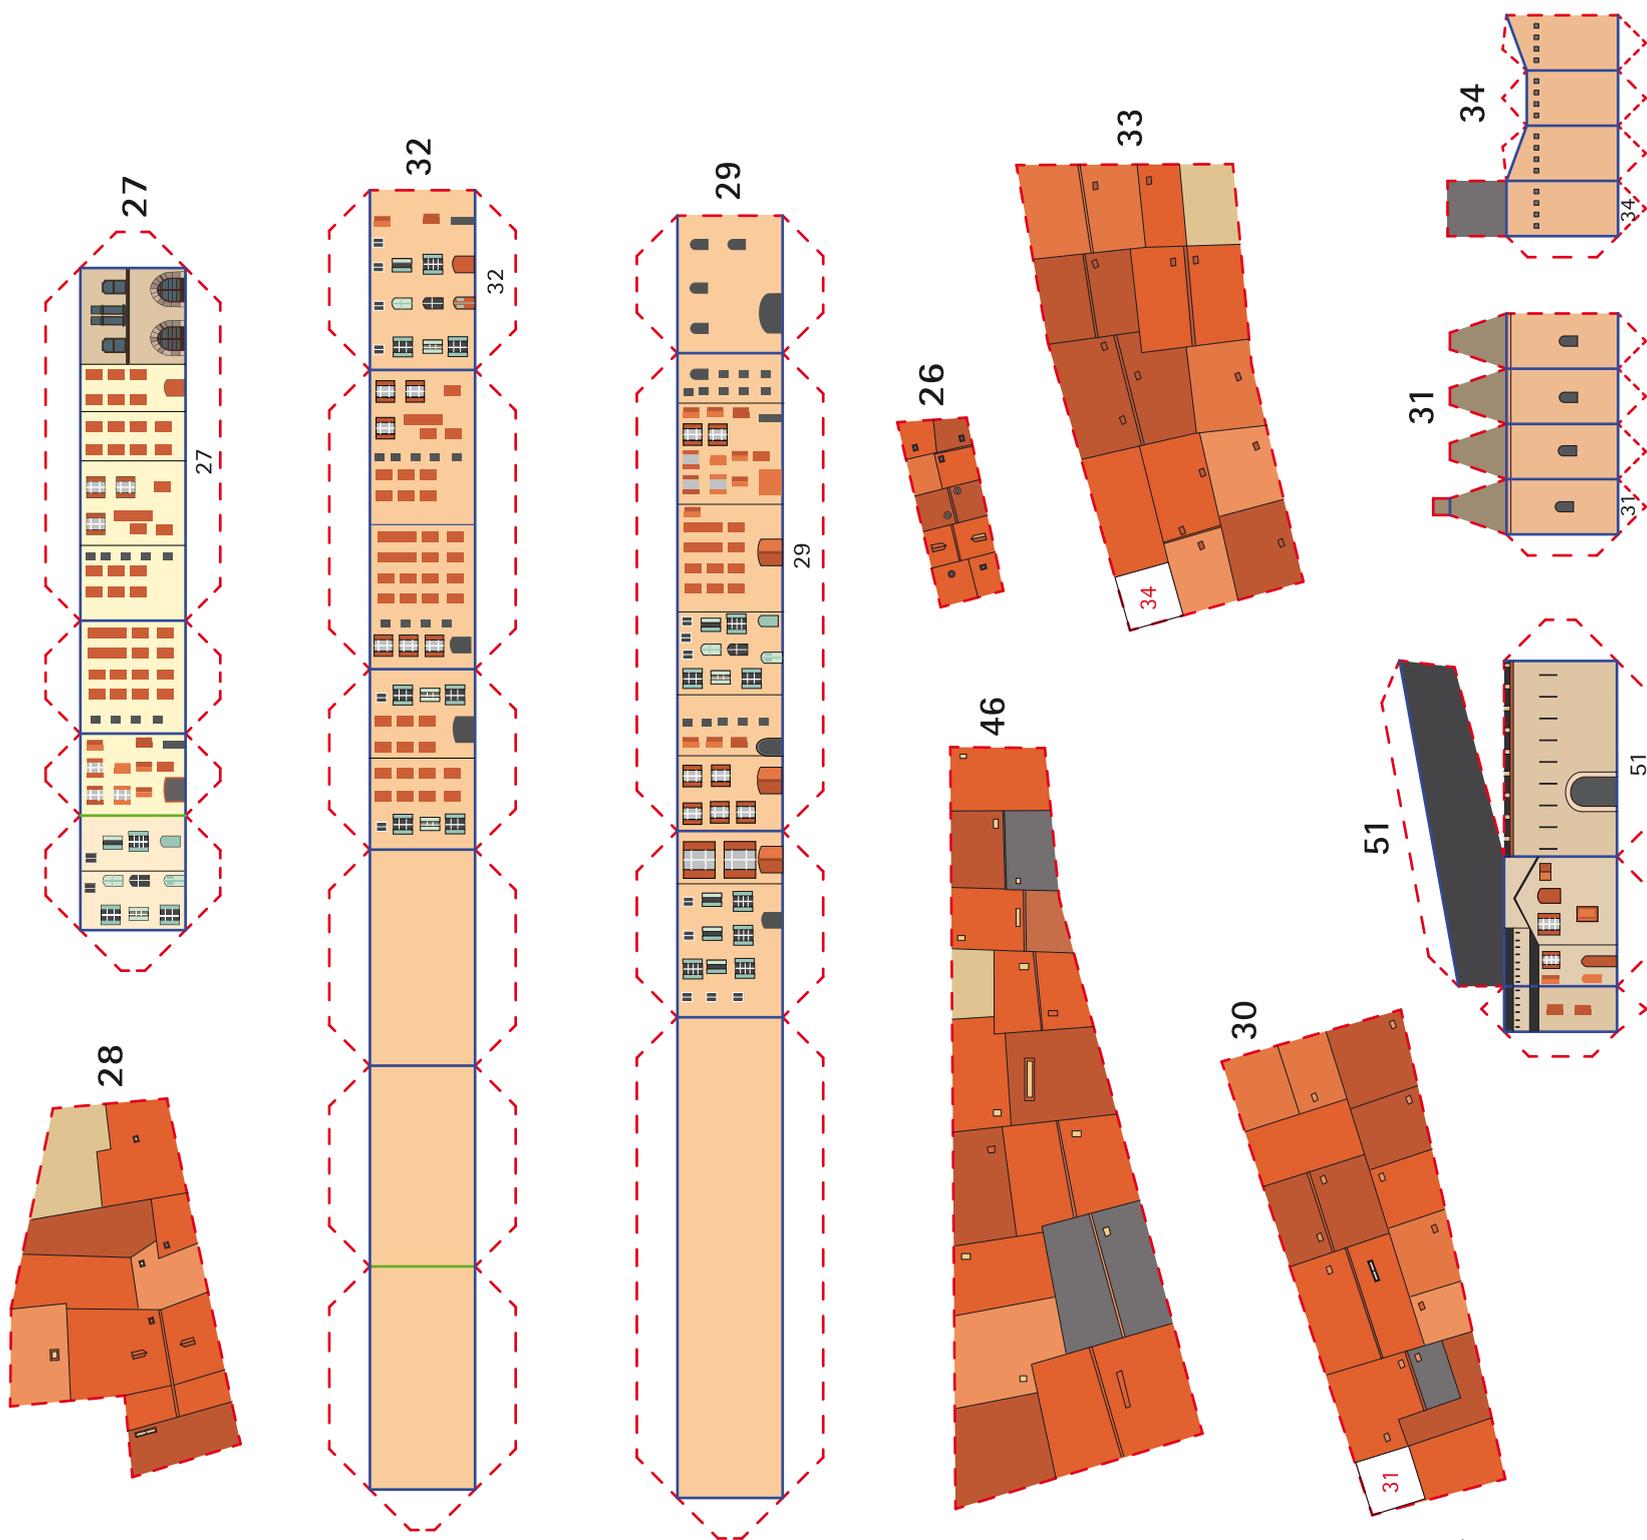

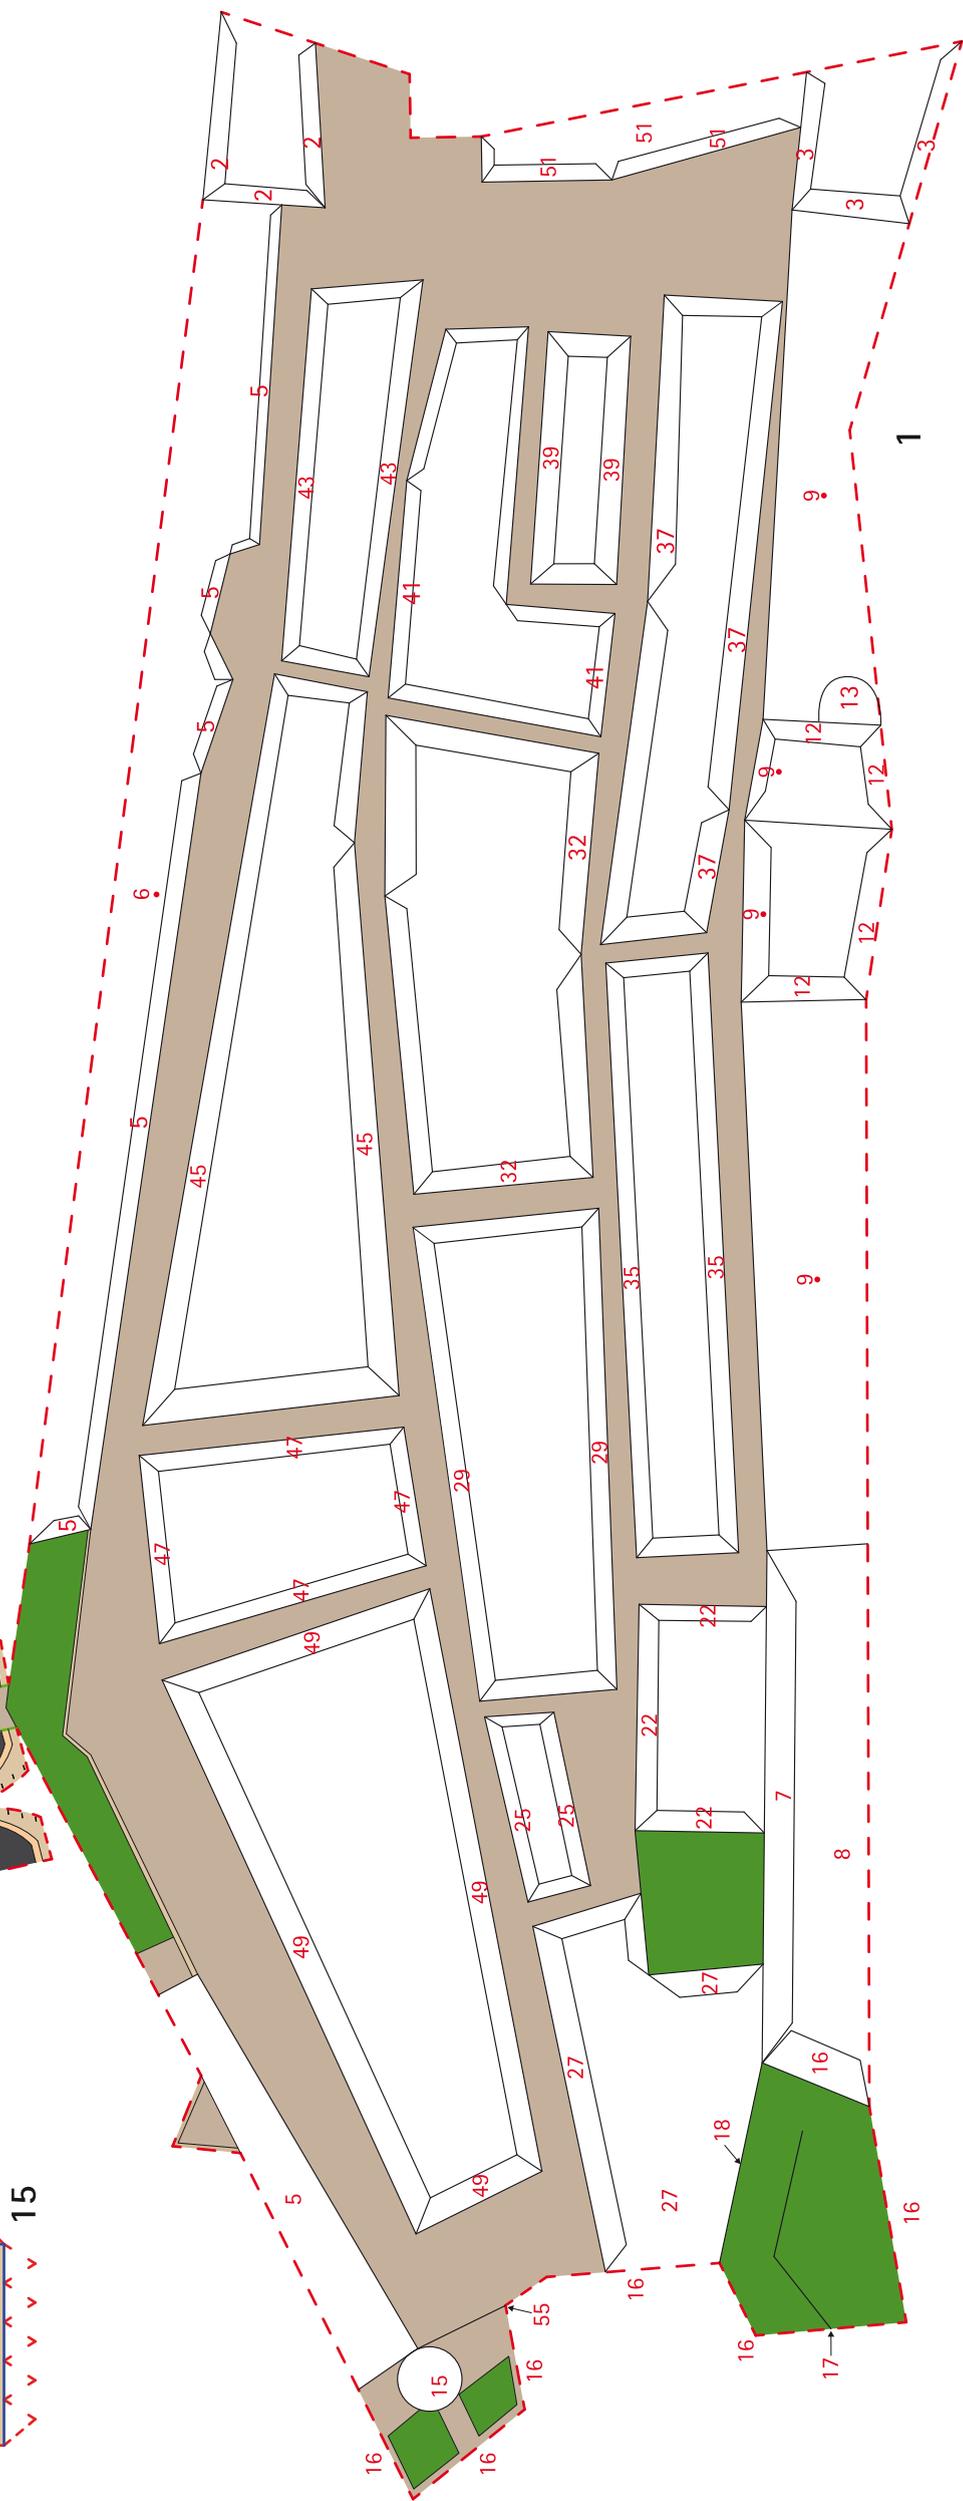

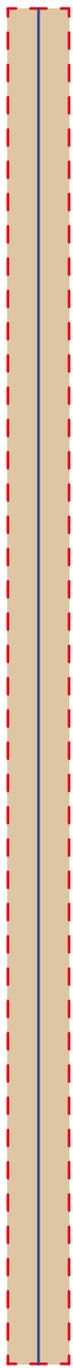

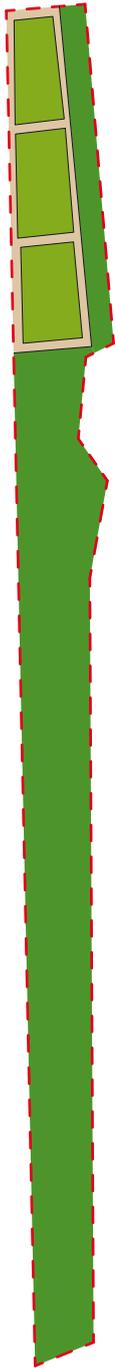

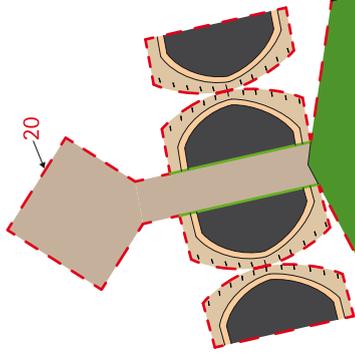

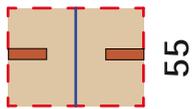

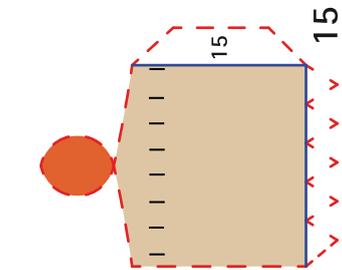

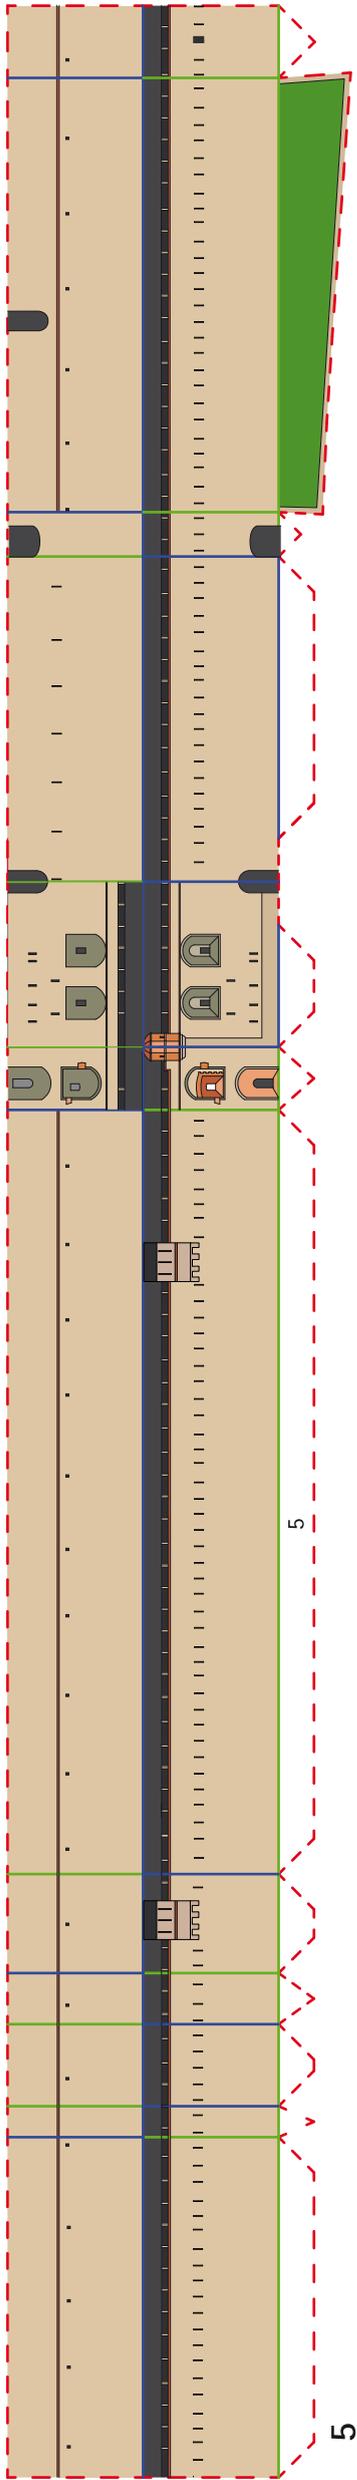

Villefranche-de-Conflent L'enceinte fortifiée

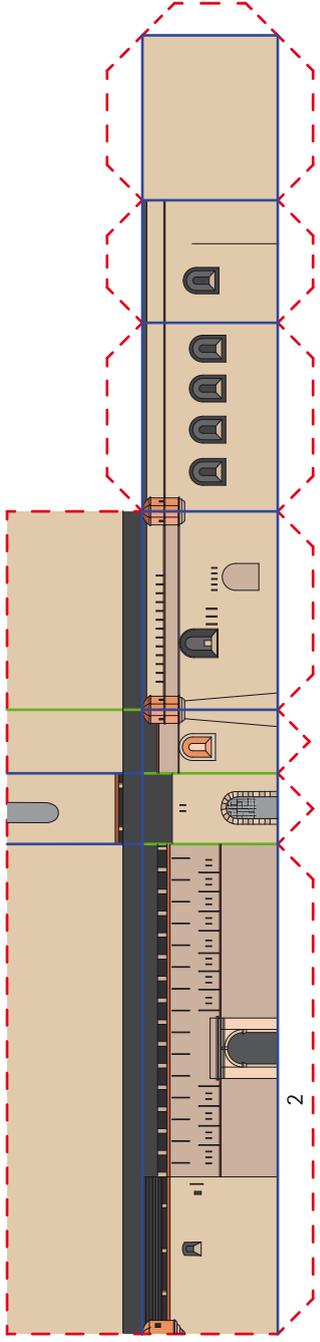

Dominée de toutes parts au creux de la vallée encaissée de la Têt, la "petite villote", dont les murailles médiévales s'étirent le long du torrent, est transformée par Vauban à partir de 1679. Il renforce l'enceinte par six bastions équipés de traverses et, des années plus tard, complète les défenses par une grotte casematée dans la montagne et par un fort qui domine la ville au nord. La place forte, dressée dans le marbre rose des carrières toutes proches, nous est parvenue dans un excellent état de conservation et d'authenticité. Située aux portes du Parc naturel régional des Pyrénées catalanes et face au Canigou, la ville a tous les atouts pour une visite de découverte riche et variée.
